MentorName
Umamaheswari

Outline

- Abstract of the Project
- Problem Statement
- Proposed Solution
- System Architecture Live
- Demo of the Project
- Embedded Video of Project
- Conclusion
- Future Scope

Abstract

- The Smart Health Dashboard transforms raw patient data into meaningful insights to support better healthcare decisions.
- It uses tools like Excel, Power BI, and AI analytics to process and visualize health data effectively.
- The system tracks key metrics such as heart rate, blood pressure, blood sugar, temperature, and patient outcomes.
- It improves hospital efficiency by enabling real-time monitoring, reducing errors, and supporting faster diagnosis

Problem Statement

- Hospitals collect large amounts of patient data but struggle to analyze it effectively
- Manual tracking of health metrics is time-consuming and error-prone
- Lack of real-time insights delays decision-making
- Difficult to monitor patient trends and outcomes
- Existing systems are not user-friendly or visually interactive

Proposed Solution

- Create an interactive dashboard using Power BI
- Analyze patient data such as vitals, diagnosis, and outcomes
- Use KPIs to track health performance
- Provide visual reports like charts and graphs
- Enable quick and data-driven decision-making

System Architecture

Data Input / Source

- Patient records (Excel dataset)
- Health metrics (BP, heart rate, sugar, temperature)Admission & discharge date

Processing / Analysis

- Data cleaning and transformation using Excel / Power BI Data analysis using Power BI
- Identify trends and patterns

AI / Tool Integration

- Microsoft Excel
- Power BI Dashboard Copilot (for insights and automation)

Output / Dashboard

- KPI cards (Avg BP, Sugar, Patients count)
- Charts (gender, diagnosis, outcomes)Reports for hospital management

Live Demo of Project

Here’s the list of some demo screenshots / features of the project:

Demo 1

Patient Id	Age	Gender	Admission date	Discharge date	Diagnosis	Heart rate	Systolic bp	Diastolic bp	Blood sugar	Temperature c	Length of stay days	Outcome
1001	62	Male	13-05-2024	29-06-2024	Hypertension	97	92	92	111	38.3	15	Recovered

[Insert your project demo video. You can embed a video your live project.]

Conclusion

- Successfully created a smart healthcare dashboard
- Improved data visualization and understanding
- Helped in faster and better decision-making
- Reduced manual effort and errors

Future Scope

- Add real-time hospital data integration
- Use AI for disease prediction
- Connect with mobile apps for remote monitoring
- Expand for multiple hospitals

Thank You
